EDUCATION

Dr. T. Thimmaiah Institute of Technology

KGF, Karnataka

Bachelor of Engineering in Computer Science & Engineering

Expected Graduation: 2027

- Academic Standing:** Cumulative Grade Point Average (CGPA): **7.83 / 10.0**
- Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming (OOP), Database Management Systems (DBMS), Operating Systems, Computer Networks, Software Engineering

TECHNICAL SKILLS

Programming:	Python, JavaScript, Java, C, SQL
Web & ML:	React.js, Node.js, Express.js, HTML5, CSS3, Tailwind CSS, Natural Language Processing (NLP), Scikit-Learn
Databases:	MongoDB, MySQL
Developer Tools:	Git, GitHub, Postman, VS Code, Vercel
Core Concepts:	RESTful APIs, Data Structures, System Design Basics, Authentication & Authorization, Responsive UI

TECHNICAL PROJECTS

AI-Powered Automated Resume Screening & Job Matching System

Academic Project

Tech Stack: Python, NLP, Machine Learning, Scikit-Learn, React.js, REST APIs

- Engineered an intelligent hiring platform leveraging Natural Language Processing and text vectorization algorithms (TF-IDF & Cosine Similarity) to score and rank resumes against job descriptions.
- Built automated parsing and preprocessing pipelines to extract unstructured data from PDF/DOCX resumes into structured skill and domain vectors.
- Architected dual-access portals for candidates to submit applications and recruiters to filter, compare, and sort applicants based on automated similarity rankings.
- Implemented modular RESTful API endpoints for asynchronous document processing, metric computations, and real-time score retrieval.

Online Secure Voting & Result Management System

Academic Project

Tech Stack: React.js, Node.js, Express.js, MongoDB, JWT, CSS3

- Developed a full-stack digital election platform enabling authenticated voters to securely cast ballots online with real-time automated result tabulation.
- Implemented secure authentication and Role-Based Access Control (RBAC) to enforce strict single-vote validation and prevent duplicate submissions.
- Created an administrative control panel for managing candidate rosters, scheduling election time windows, and publishing transparent results.
- Designed normalized database schemas with strict validation constraints to guarantee transactional consistency and tamper-proof ballot logs.

KEY STRENGTHS & COMPETENCIES

- Problem Solving:** Strong foundational understanding of Data Structures & Algorithms, regularly practicing algorithmic design and complexity optimization.
- Full-Stack Development:** Hands-on experience architecting scalable full-stack web applications, integrating responsive frontends with secure backend APIs.
- Applied Machine Learning:** Practical experience developing text-processing and predictive models with NLP pipelines and Python data libraries.
- Engineering Best Practices:** Proficiency with Git/GitHub version control, modular code architecture, and modern deployment workflows on platforms like Vercel.
